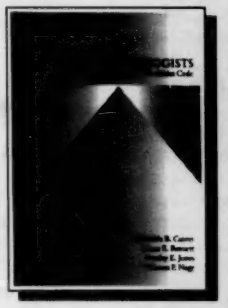
ETHICS *for* PSYCHOLOGISTS

A Commentary on the APA Ethics Code

Mathilda B. Canter, Bruce E. Bennett, Stanley E. Jones, and Thomas F. Nagy

This book is offered as a practical resource to help psychologists learn and apply the APA Ethical Principles of Psychologists and Code of Conduct.

In three concise sections, **Ethics for Psychologists** informs psychologists of salient considerations in ethical decision making.



The first section acquaints the reader with the overall process of ethical decision making and describes the history of the APA Ethics Code.

The second part examines the 1992 revision of the Ethics Code in depth, including standards that are applicable to all psychologists and standards that may be more or less applicable to an individual psychologist depending on his or her professional role. The discussions in this section are conveniently organized in the same sequence as the standards from the APA Ethics Code. Each commentary provides additional descriptive material to address the questions that are likely to be raised by psychologists with regard to a given standard.

The last section puts the ethical principles in context by describing how psychology is regulated by professional organizations as well as local, state, and federal law.

This Annual Author Index contains over 90,000 references to the authors and editors of approximately 45,000 abstract records published in the 12 monthly issues of *Psychological Abstracts* from January 1994 through December 1994. A companion work, the Annual Subject Index, references these records by topic.

In this volume, all the authors and editors whose work was abstracted or cited in *Psychological Abstracts* for the periods indicated are listed alphabetically by surname. However, the Author Index is intended to be a name index only and not a person index. "Adams, P." will be listed separately from "Adams, Paul," even though the names may refer to the same person. Two listings for "Adams, P." may also refer to two different authors. Due to variation in the representation of names that exist in source documents, alternative locations should be consulted. As many as four authors may be listed per selection. If there are more than four, the fourth author is followed by "et al." Primary entries consist of author name(s), the title of the selection (if foreign), a citation of the original source document, and the *Psychological Abstracts* abstract number under which the entry appeared. All secondary authors are cross-referenced to the primary entry, and the abstract number in *Psychological Abstracts* is printed as well.
